

A man with a beard, wearing a light blue blazer over a blue shirt and dark trousers, stands in a modern office, pointing with a red marker at a diagram on a whiteboard. The diagram is a flowchart with a top box labeled 'AS' and three boxes below it labeled 'E1', 'E2', and 'E3'. Arrows point from 'E1' and 'E2' to a box labeled 'E4', and from 'E3' to a box labeled 'E5'. Below 'E4' and 'E5' is a large box labeled 'E6'. The man is smiling and looking at the audience. Three people are seated at a table in the foreground, looking at the whiteboard. The room has large windows with blinds and a modern interior.

In the heart of Switzerland

How to get here / Location map

How to get here

How to reach us

Arriving by car or public transport

Thanks to our central location, we are easily accessible from anywhere. In addition to arriving by car, travelling to Swiss Holiday Park by public transport is also very easy. (Drive to Brunnen, where you can take bus no. 504 to Morschach from Brunnen railway station. The bus runs every half hour in both directions. Get off at the Swiss Holiday Park stop and you are right in the middle of our resort.)

Route planner

Search for connection

Parking facilities

Over 300 parking spaces are available in one of the two garages or on our parking deck (underground garage entrance height 2.10 m).

Electric charging stations

Electric charging stations are located in our underground garage. The charging stations are accessible 24 hours a day. Costs vary depending on the charge.

Please bring your own charging cable.

- 2x Type 2 (22 kW, 32A, 3Ph)
- 2x CH T25 (11 kW, 16A, 3Ph)

CO2 neutral since 2017

Our environmental policy

Heat

District heating is generated from biogas and waste wood and is therefore CO2-neutral. This saves 1,800 tonnes of CO2 per year. Using district heating saves around 650,000 litres of heating oil per year, which translates into many tonnes of CO2.

Water

Swiss Holiday Park is also addressing the issue of discharging treated water into a receiving watercourse. This very clean water hinders the wastewater treatment plants in the process of cleaning sewage water and unnecessarily dilutes the otherwise dirty wastewater. We therefore want to use an internal treatment process to discharge the wastewater from the pools into the municipality's rainwater drainage system*, which ends in Lake Lucerne.

*Meteor water is water from precipitation: rain, snow, dew, hail and/or fog.

Electricity

Our electricity is generated from 100% hydropower, and the corresponding hydropower plants have been awarded the naturemadebasic eco-electricity certification. Since 2007, all existing light fixtures have been replaced with energy-efficient LED lighting during renovations. In many areas of the facility, motion detectors are used to significantly reduce lighting times.
